

Netflix Contents Analysis Report

Prepared by: Aashish Kapadia

Date: May 2026

Tools Used: Python (Pandas), Tableau, Microsoft Word

Dataset: Kaggle [Netflix Movies and TV Shows](#)

Netflix Dashboards Story

1

2

3

1. Summary:

This report analyses **Netflix Content Library** of 15K+ rows of unique data across Movies and Tv Show that was released duration from (1940-2021). The analysis covers content distribution by type, rating, country, genre and runtime.

"Data was sourced from Kaggle, cleaned using Python Pandas, visualized in Tableau and documented in Microsoft Word."

Key points are:

- Netflix library is 97.2% Movies and 2.8% TV Shows.
- United States dominates.
- TV-MA is the most common rating.
- Content additions peaked duration (2015-2020).
- Most movies fall in 90–119 minute runtime range.

2. Data Overview:

METRIC	VALUE
Total Unique Titles	15,320
Movies	14,873
TV Shows	447
Countries Represented	80+
Ratings Categories	14
Date Range	1940-2021

3. Charts & Analysis:

3.1. Content Type Distributions Chart:

Observation:

This Chart Visualise that Content Distribution over Netflix:

Key points are:

1. Movies have Highest area capture with **97.08%**.
2. Tv Show Capture a area of **2.92%**.

3.2. Contents By Rating's:

Observation:

In this chart give a properly that most movie and Tv show get **Tv-MA** rating with highest Count of 5,019 points.

And the top 5 are:

1. TV-MA (5,019)
2. TV-14 (3,435)
3. R (2,463)
4. PG-13 (1,527)
5. TV-PG (1,189)

Insight: Over 70% of content is rated for mature audiences (TV-MA, TV-14, R). Netflix clearly targets adult viewers.

3.3. Titles Added By Per Year's:

Observation:

Netflix went from ~1089 titles in 2015 to 1,852 movies in 2018 — nearly 9x growth in just 3 years. This was Netflix's aggressive global expansion phase.

Netflix Peak Year is 2018 — Not 2019:

Tooltip confirms 2018 = 1,852 movies. This is the real peak for release year. Earlier analysis said 2019 was peak for year added — these are two different things. Release year vs added year.

Sharp Drop After 2018:

Post-2018 drop is steep — two reasons:

- COVID-19 shut down productions in 2020-2021
- Netflix shifted focus from quantity to original quality content

TV Shows flatlined entire period:

Gray line barely moves above zero from 1940–2021. Confirms this dataset is movie dominant — TV shows never crossed ~100 in 2020.

Pre-2010 content is minimal:

Almost zero titles before 2005 — Netflix didn't add old classic content aggressively. Library is heavily modern (2010–2021).

The 1940–2000 long tail:

Small consistent line from 1940 onwards — these are old classic movies added to Netflix. Not zero but very low volume.

3.4. Top 10 Country:

Observation:

1. United States dominates massively

US sits at ~4,600+ titles — nearly double India which is #2 at ~2,500. No other country comes close. Netflix was born in the US and built its library around Hollywood content first.

2. India is a serious

~2,500 titles — India's position reflects Netflix's massive investment in Bollywood and regional Indian cinema. India has one of the largest film industries in the world by volume.

3. Huge gap after Top 2

UK at ~1,000 is less than half of India. France and Canada around 600-500. After the top 2 — everyone else is far behind.

4. European presence is spread thin

UK, France, Canada, Spain, Germany all appear — but individually small. Combined they might match India but individually none are dominant.

5. Nigeria's appearance is significant

Nigeria (Nollywood) making top 10 is noteworthy — Nollywood is the 2nd largest film industry by volume in the world. Netflix recognized this early.

6. Asia underrepresented

Japan and China combined are under 500 titles despite being massive film markets. This suggests Netflix had licensing and censorship challenges in Asia during this period.

3.5. Top 12 Genres:

Observation:

1. Dramas & International Movies are neck and neck Both sitting at ~3,000+ — virtually tied at the top. This is not a coincidence — **most International Movies And Dramas**. There is heavy overlap between these two categories.

2. Top 3 create a clear tier Dramas (~3,000), International Movies (~3,000), Comedies (~1,800) form a dominant top tier. Then a **massive gap** before Action & Adventure at ~1,100. Three genres dominate everything else.

3. International Movies at 2 is a big signal Netflix consciously built a **global content library** — not just Hollywood. International Movies ranking this high means users worldwide are watching content from other countries. Think Money Heist, Sacred Games, Dark.

4. Independent Movies at 5 is surprising ~1,000 independent films — Netflix became a **refuge for indie filmmakers** who couldn't get theatrical releases. This differentiated Netflix from traditional studios.

5. Kids content is low Children & Family Movies at ~650 — considering Netflix has a kids section, this number is relatively small. Suggests Netflix **under-invested in kids content** during this period.

6. Horror & Sci-Fi combined under 800 Two of the most passionate fan communities — yet both are relatively small. Big **opportunity gap** Netflix could exploit.

7. Music & Musicals at the bottom ~320 titles — clearly a niche category. Netflix never positioned itself as a music content platform.

3.6. Movie Runtime Distributions:

Observation:

The Movie Runtime Distributions chart give a proper knowledge that users most prefer 93-100 min movies and enjoy the content

The top 5 Duration are:

1. 93 min with count of 396.
2. 97 min with count of 382.
3. 94 min with count of 382.
4. 95 min with count of 373.
5. 96 min with count of 368.

And the full observation tells the highest duration is 253 min with count of 3 only.

3.7. TV Show Seasons Distribution:

Observation:

1. 1 Season dominates completely ~325 shows have only 1 season — that's **72%+ of all TV shows**. Overwhelming majority never made it past season 1.

2. Sharp cliff after Season 1 2 Seasons drops to ~55 — that's **6x fewer** than 1 Season. After that everything is tiny. Classic power law distribution.

3. Three reasons for 1 Season dominance:

- Netflix **cancels shows aggressively** if viewership drops
- Many are **limited series** — designed as one season only (like a miniseries)
- Some are **licensed shows** where Netflix only acquired 1 season rights

4. 15 Seasons appearing is surprising One show with 15 seasons — likely a long-running licensed show like Grey's Anatomy or a soap opera added to the catalog.

5. Only 10 shows made it to 5+ seasons Combined 5, 6, 7, 8, 9, 15 seasons = barely 15 shows total. **Surviving past 4 seasons on Netflix is extremely rare.**

3.8. Content Added by Month:

Observations:

- 1. January is the peak month** ~1,480 titles added — highest of all months. Netflix front-loads content at the **start of the year** to capture New Year subscribers.
- 2. February is the weakest by far** ~970 — only month under 1,000. Nearly **500 fewer titles than January**. Shortest month + no major holidays = least content drops.
- 3. July and October are joint second peaks** Both ~1,400 — July captures **summer binge season**, October captures **Halloween/fall season** when people stay indoors more.
- 4. Two clear dips — February and May** Feb ~970 and May ~1,010 are the two valleys. Both are transitional months — **post-holiday and pre-summer** — when viewer demand is lower.
- 5. Rest of the year is remarkably consistent** Mar, Apr, Jun, Aug, Sep, Nov, Dec all sit between 1,200–1,400. Netflix maintains **very consistent monthly content cadence**.

6. No month is completely neglected Even the lowest month (Feb) has ~970 titles — Netflix never goes silent any month.

3.9. Top 10 Directors:

Observation:

1. Youssef Chahine leads at 46 titles Egyptian director dominating the list — reflects Netflix's **strong international/Middle Eastern content** acquisition. Most of his work is classic Arabic cinema added in bulk.

2. Cathy Garcia-Molina at ~37 Filipino director — confirms Netflix's **Southeast Asian content push**. Known for romantic Filipino films — huge audience in Asia Pacific region.

3. Martin Scorsese at ~35 Only Hollywood A-lister in top 3 — his back catalog is massive. Netflix likely **licensed his entire filmography** rather than producing new content.

4. Lars von Trier at ~33 Danish art-house director — surprising appearance confirms Netflix acquired **European arthouse cinema** heavily. Not mainstream but critically acclaimed.

5. Steven Spielberg at ~32 Hollywood legend — similar to Scorsese, **back catalog licensing** explains the high count. Jaws, Schindler's List, Indiana Jones etc.

6. Bottom 5 are very close — 28 to 30 Olivier Assayas, Tom Hooper, Don Michael Paul, Johnnie To, David Dhawan — all within 2-3 titles of each other. Very **competitive mid-tier**.

7. David Dhawan at 10 Bollywood comedy director — confirms India's strong presence. His appearance alongside Scorsese and Spielberg shows **Netflix truly treats Bollywood as equal to Hollywood**.

3.10. Content Add Based on Year:

Observation:

1. Peak is 2018 at ~1,852 titles Sharpest point on the entire chart — 2018 was Netflix's **maximum content acquisition year**. They were spending billions on licensing and originals simultaneously.

2. Near zero from 1940 to 2000 60 years of film history barely registers. Netflix is **not a classic cinema platform** — it's built for modern content consumers. Old films exist but are not the focus.

3. Slow burn 2000 to 2013 Gradual increase from ~50 to ~200 titles. This was Netflix **transitioning from DVD rental to streaming** — carefully building the digital catalog.

4. Explosive growth 2013 to 2018 From ~200 to 1,852 in just 5 years — **9x growth**. This matches Netflix's global expansion into 190 countries in 2016. They needed massive content volume fast.

5. Small dip around 2010-2011 Visible bump then slight drop — this was when **Netflix and studios were fighting over streaming rights**. Several studios pulled content temporarily.

6. Sharp cliff after 2018 2019 drops to ~1,400, 2020 to ~1,000, 2021 to ~450. Three reasons:

- **COVID-19** shut productions globally

- Studios launched **own streaming platforms** (Disney+, HBO Max) and pulled content from Netflix
- Netflix shifted from **quantity to quality** originals strategy

7. 2021 drop is dramatic Nearly 75% drop from 2018 peak — the **streaming wars began**. Netflix lost licensing deals as competitors hoarded their own content.

4. Conclusions & Recommendations:

Conclusions:

1. Netflix is a **movie-first platform** — 97.2% movies
2. **Mature content dominates** — TV-MA is #1 rating
3. **US and India** are biggest content contributors at 64%
4. Content growth **peaked 2018** then declined post COVID
5. **Drama and International** content drives volume
6. **72% TV shows cancelled** after 1 season

Recommendations:

1. Increase TV Show catalog — 2.8% is too low
2. Invest more in **Kids content** — severely underrepresented
3. Expand **African and Latin American** content
4. **Horror and Sci-Fi** are underserved despite passionate fanbases
5. Focus on **90-119 min** movies — proven sweet spot

5. Tools & Methodology:

Steps	Tools
Data Collection	Kaggle
Data Clearing & Analysis	Python (Pandas)
Visualization	Tableau
Reporting	Microsoft Word
